

New names : faster, easier, smarter

Since early 2001, Coelme and Egic have joined their efforts to provide their customers with the best equipment and service.

Becoming even more internationally oriented we are going to give progressively to our well known disconnectors new names, in order for integrators and final users to get intuitive and international names, and to improve our efficiency in communicating and working together.

These names include all the necessary information necessary to identify the needed product for the aimed function :

- switch geometry
- existence of 1 or 2 integrated earth switches
- rated voltage U_r as per IEC 60694, referring by default to the highest insulation level (BIL) displayed in the standard table.
- rated permanent current I_r as per IEC 60694, for normal ambient temperatures (-25 / +40°C)

VR2D 72.5 - 550 kV

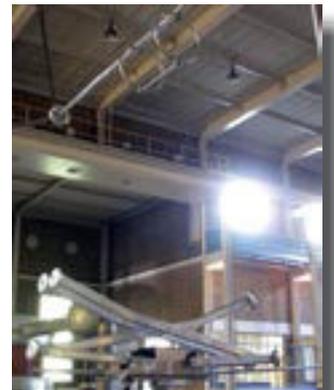

In accordance with this naming strategy, we are pleased to introduce our range of 2-arm Vertical Reach Disconnectors, as the "VR2D" line of products.

This name applies to all 2-arm pantographs, including our former "SP" and "SP-C" ranges

from :
VR2D 72.5-1250

to :
VR2D 550-4000

Since we changed the commercial name only, all type tests carried out on disconnectors with previous designations keep their validity and can be applied to the corresponding newly named equipment.

The whole team of our company will be pleased to provide any useful additional information.
