Flexibility and efficiency
from metering to billing

Converge – for an automated, end-to-end process

Converge is Landis+Gyr's automatic meter reading system. The system delivers the prerequisites for an automated, end-to-end process – from metering to billing.
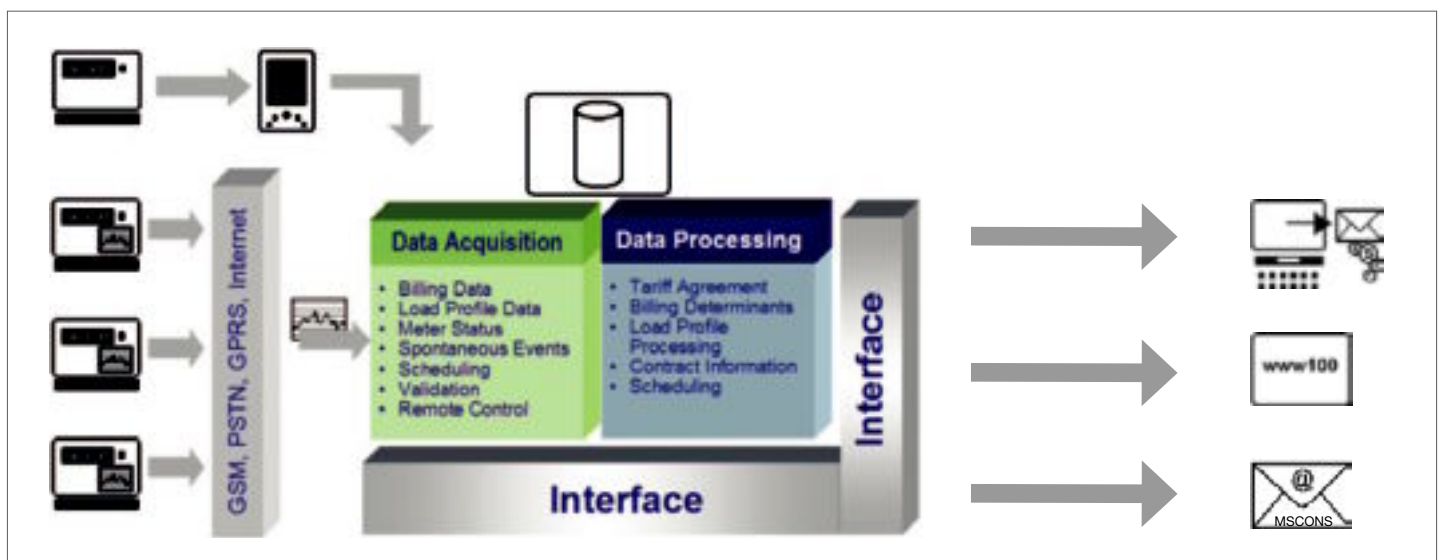

Competition is the motor of improvement. That also goes for energy supply companies striving to utilise their full potential in order to enhance their competitiveness.

As a consequence, there are increasing demands on the quantity, quality and availability of data. This makes the need for automated, end-to-end processes all the more urgent.

Data from a wide variety of meters is read, edited, processed, and passed to various market players. Such process data provides the basis for customer care, offer planning, and billing of services provided.

Therefore, metering data becomes key to determining energy consumption, developing customer-specific offerings, optimal power system control, as well as billing. However, total transparency and enhanced competitiveness for you can only be achieved with an end-to-end process up to and including the consumer's computer via the internet.

With Converge, Landis+Gyr delivers the prerequisites for an automated, end-to-end process – from metering to billing. Its open system architecture provides for integration with other solutions for the purpose of analysis and simulation of consumption behaviour, or for energy consumption billing: Converge provides the basis for a powerful data warehouse system.
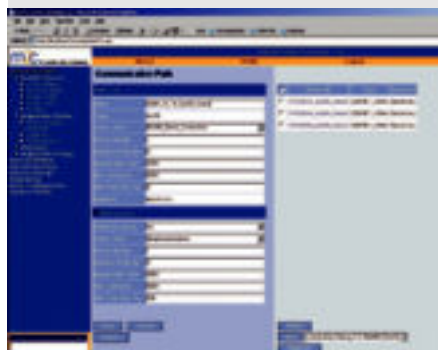

The system utilises the latest software technology. It can be configured as a standalone or multi-user system. Its scalability and modular design provide the prerequisites for a solution that is specifically tailored to your needs.

Converge is scalable and flexibly adaptable to your changing business processes, so it grows in step with your needs. With increasing competition, the demands and requirements of your large consumers also increase. Tariffs become transparent, services comparable, and the price-to-performance ratio becomes a decisive selling point. Only those service providers that are able to make the optimal offer to key accounts have the edge for sustainable success.

Converge enables you to acquire customer-specific data automatically, and to produce clearly laid out graphs, tables, reports and tariff structures from it. This valuable information can be transferred via the internet at a click of the mouse.

By offering greater process efficiency and enhanced compatibility with meters and billing systems, Converge increases your competitiveness throughout the entire process from metering to billing. Why not profit from our many years of experience in the electricity industry?

Manage energy better

We deliver peace-of-mind when it comes to managing your energy. Decades of leadership in technology and in-depth knowledge at Landis+Gyr means we are able to offer you an extensive, high quality and proven portfolio.

Obtaining the highest level of energy efficiency has never been easier. We have translated our unique expertise of utility processes into integrated energy management solutions and we can help you streamline your processes, increase customer loyalty and secure revenue.

Let us tailor our innovative solutions to meet your specific needs. Whether electricity, water, heat/cold, gas metering or load management, we provide what you need to ensure that your energy is managed with increased precision and reliability.

With Landis+Gyr as your trusted partner, you can manage energy better.
