

Converge NEWS

Dear Converge User

Converge Version 3.3 available since end of August 2006.

Order your update today to profit as soon as possible from these changes and agree an installation date with our Customer Service Center. If you have a standing service contract you receive the new version (software) for free, any installation effort is accounted for after expenses. Send your order to our Customer Service Center by e-mail to HELPDESK@metertocash.com.

Kind regards

Karl Scheuber, Product Manager Converge

New features

- *advantis* functions
Automatic read out of residential meters
- Introduction of Password Policy
- Support of Oracle 10g
- Settings in the window «meter data» are saved.
- Limits defined in the data validation module for a particular meter are displayed in the window «meter data».

advantis functions

The Landis+Gyr *advantis* solution comprises three main components (see picture).

The residential meters are read through PLC (Power Line Carrier) by a data concentrator. The Central Station polls the data concentrator and processes and subsequently forwards the meter data to the billing system.

Within Converge, the functions are released by a simple license extension, which is necessary for the residential market. No new installation of Converge is required.

New meters supported

Converge 3.3 now also supports the following meter protocols:

IEC1107

- Landis+Gyr heat meter 2WRx
- Enermet E700

DIN 19244

- Dr. Neuhaus ZIS90

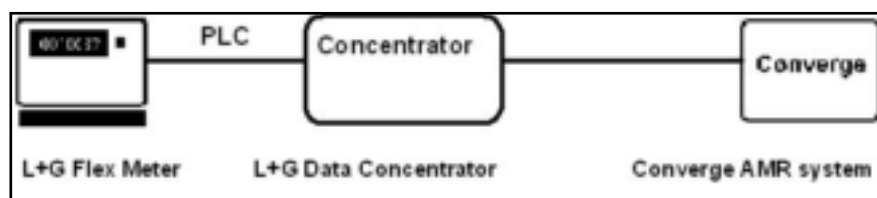

IEC 870-5-102

- SAE ZFA10

Release document

Would you like to receive the full documentation of the new developments and improvements in Converge 3.3?
