Energy Data Analysis

www100

Delivers data to your
customers online

www100 – data access anytime, anywhere

Landis+Gyr's www100 combines a highly functional web server with a unique browser interface. It enables you to deliver metering data directly and reliably to your customers.

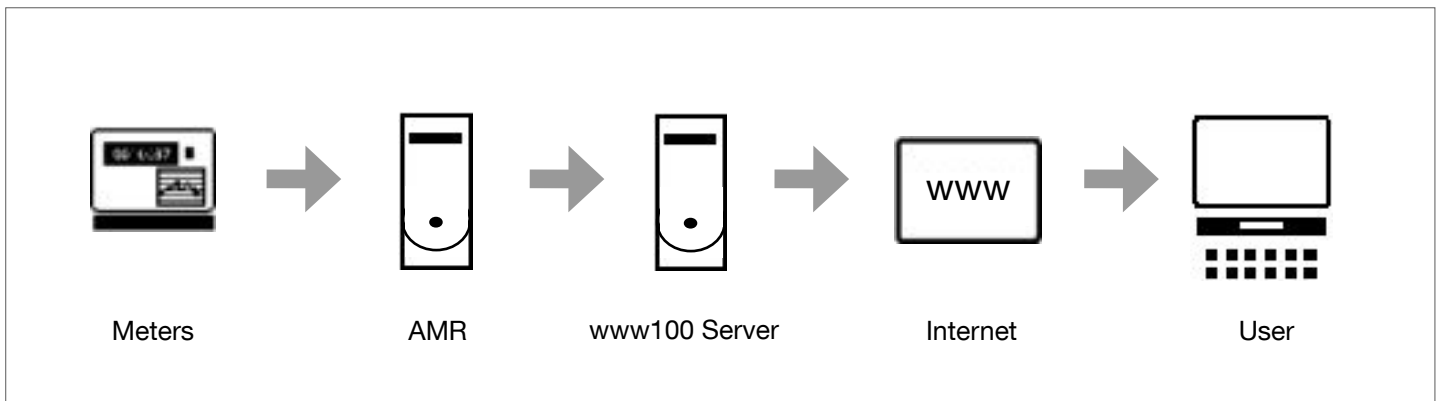

The only way to guarantee success in today's energy marketplace is to provide service to the max. Energy suppliers survive and thrive in the new environment with a combination of tailored supply contracts and information services.

The Captive Browser with its graphical user interface enables your customers to create their own complex reports.

Landis+Gyr's www100 creates a platform for you to deliver web-enabled applications and services directly to your customers.

The Captive Browser environment and integrated portal can be modified to accommodate the specific requirements of consumers, as well as key account managers and product managers within your own organisation. That makes it easy to automatically supply all relevant information both safely and reliably via the Internet.

www100 at a glance

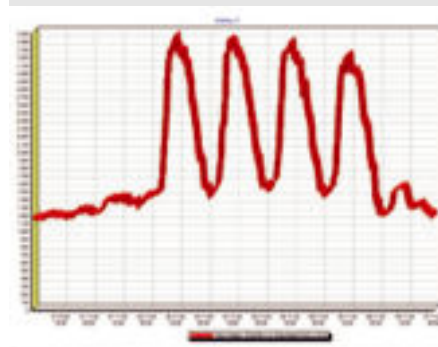

The main purpose of www100 is distribution of metering data via network.

The system obtains the load profile information from the central automatic meter reading system or meter data warehouse, and stores it on a separate, dedicated server. Authorised users can then access the multi-client enabled system via a network (LAN/WAN/internet) in order to call up their own load profile information.

Users can view their metering data in a variety of different forms. Both graphical and tabular presentations are possible. In order to achieve greater transparency of the various tariffs, you can superimpose the tariff agreements onto the load profile in a few simple steps.

A fully configured Landis+Gyr www100 system is an excellent visiting card for any energy supply company.

Manage energy better

We deliver peace-of-mind when it comes to managing your energy. Decades of leadership in technology and in-depth knowledge at Landis+Gyr means we are able to offer you an extensive, high quality and proven portfolio.

Obtaining the highest level of energy efficiency has never been easier. We have translated our unique expertise of utility processes into integrated energy management solutions and we can help you streamline your processes, increase customer loyalty and secure revenue.

Let us tailor our innovative solutions to meet your specific needs. Whether electricity, water, heat/cold, gas metering or load management, we provide what you need to ensure that your energy is managed with increased precision and reliability.

With Landis+Gyr as your trusted partner, you can manage energy better.
